2. The following is an examiner's statement of reasons for allowance: US 6,868,451 by Peacock teaches about a data exchange between a handheld device and another computer system using an exchange manager via synchronization. In the art, it is customary for a portable device to store personal information in a central storage location "Host Computer" using a user interface unit "cradle" and some time later, retrieves data from the central storage location using the user interface unit (Col 7, lines 45-65). In applicant invention the user interface unit "information intermediary apparatus" is able to retrieve data on behalf of a portable device by retrieving the data from another user interface unit "another information intermediary apparatus" (See specification Page 26, lines 23-28). Prior art failed to teach this feature.
